Deferred tax resulting from timing difference between book profit and taxable profit for the year is calculated by using the tax rates and laws that have been enacted as on the Balance Sheet Date. The deferred tax assets is recognized and carried forward only to the extent that there is a certainty that the asset will be adjusted in future.

Minimum Alternate Tax (MAT) paid in accordance with tax laws, which give rise to future economic benefits in the form of adjustment of future tax liability, is recognized as an asset only when, based on convincing evidence, it is probable that the future economic benefits associated with it will flow to the Company and the assets can be measured reliably.

xii. Contingent Liabilities

Claims against the Company not acknowledged as debts are treated as Contingent Liabilities. Provision in respect of contingent liabilities if any, is made when it is probable that a liability may be incurred and the amount can be reasonably estimated.

xiii. Earning per share:

The basic earnings per share (EPS) is computed by dividing the net profit after tax for the year by the weighted average number of equity shares outstanding during the year. For the purpose of calculating diluted earning per share, net profit after tax for the year and the weighted number of shares outstanding during the year are adjusted for the effects of all dilutive potential equity shares. The dilutive potential equity shares are deemed converted as of the beginning of the period, unless they have been issued at a later date. The dilutive potential equity shares have been adjusted for the proceeds receivable had the shares been actually issued at fair value (i.e. the average market value of the outstanding shares).
